Abstracts

The wireless manhole cover abnormality sensor is installed on the back of the manhole cover in practice. It can detect the current tilt of the manhole cover in real time. When the tilt angle is greater than the set warning value, it automatically triggers an alarm and uploads relevant data to the cloud platform in real time. Smart manhole covers have been upgraded from manual management to Internet of Things information management, and a wireless network monitoring system for smart manhole covers has been established, which can improve work efficiency and reduce accidents during travel.

The global Wireless Manhole Cover Abnormal Sensor market size was estimated at USD 78.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
