Report Overview

Wound Plasters, also known as adhesive bandages or band-aids, are medical supplies designed to protect and cover minor wounds, cuts, and abrasions. They are typically made from a flexible, non-woven material, such as cotton or polyester, coated with a hypoallergenic adhesive that securely sticks to the skin without causing irritation. The central portion of the plaster is sterile and made from a soft, absorbent material, such as gauze or cotton, which helps to absorb any wound exudate and keep the wound clean. Wound plasters come in various sizes and shapes to accommodate different wound types and locations, and they often feature a non-stick pad to prevent further irritation to the wound. They serve as a barrier against bacteria and contaminants, facilitating the healing process while providing a comfortable and discreet solution for wound management.
