Report Overview

A Wrist Type Blood Pressure Monitor is a compact, portable medical device designed to measure an individual's blood pressure at the wrist level. This device typically consists of an inflatable cuff, a pressure gauge, and a stethoscope. It operates by inflating the cuff to apply pressure on the wrist, which temporarily restricts blood flow. As the cuff deflates, the gauge measures the pressure changes, and the stethoscope listens for the Korotkoff sounds, which are the sounds of blood flowing through the artery. The device then calculates and displays the systolic (the highest pressure during a heartbeat) and diastolic (the lowest pressure between heartbeats) blood pressure readings, offering a quick and convenient way for users to monitor their blood pressure levels at home or on-the-go.
