### Report Overview

An X-band active phased array radar is a sophisticated radar system used for various applications, including weather monitoring, air traffic control, defense, and aerospace. The radar operates in the X-band frequency range, typically around 8 to 12 gigahertz (GHz). X-band radar offers high resolution and accuracy, making it suitable for applications requiring precise detection and tracking of targets. The radar utilizes dual polarization, meaning it transmits and receives radio waves in both horizontal and vertical polarizations simultaneously. Dual polarization enables the radar to gather additional information about the physical characteristics of targets, such as shape, size, and composition, improving target discrimination and classification.
