Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on X-Ray Absorption Fine Structure Spectrometer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. X-ray absorption fine structure spectrometer is a high-precision instrument that uses the interaction between X-rays and matter to analyze the atomic and electronic structure of materials. It obtains information about the atomic environment, such as coordination number, bond length, and local symmetry, by measuring the absorption characteristics of specific elements to X-rays of different energies, especially the energy region close to the absorption edge of the element. XAFS technology includes X-ray absorption near-edge structure (XANES) and extended X-ray absorption fine structure (EXAFS). It is widely used in materials science, chemistry, physics, geology, biology and other fields, providing researchers with a powerful tool for non-destructive detection of the internal structure of samples. The X-ray absorption fine structure spectrometer (XAFS) market is showing a steady growth trend, mainly due to the increasing demand for in-depth research on the atomic and electronic structure of materials in the scientific research field. In the market, desktop XAFS equipment has gradually been favored by more laboratories due to its relatively small footprint, easy operation and continuously decreasing costs, which has promoted the expansion of this technology from traditional large-scale synchrotron radiation facilities to ordinary laboratory environments. At the same time, with the advancement of technology, the resolution and data acquisition speed of XAFS spectrometers have been significantly improved, further enhancing its application value in new material development, energy science, environmental protection and life science research. Globally, especially in emerging markets such as Asia, the demand for such high-end analytical instruments is growing rapidly, driving intensified market competition and

accelerated technological innovation. In addition, manufacturers are also working hard to meet the needs of different customer groups by providing customized solutions and improving user interfaces.

The global X-Ray Absorption Fine Structure Spectrometer market size was estimated at USD 135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
