Report Overview

An X-Ray Protective Gonad Shield is a specialized medical device designed to protect the gonads (testes or ovaries) from ionizing radiation during diagnostic or therapeutic X-ray procedures. This shield is typically made from materials with high radiation attenuation properties, such as lead or other dense metals, which effectively absorb or block X-rays. The device is strategically positioned over the patient's reproductive organs to minimize the risk of radiation-induced damage, particularly in sensitive areas that are more susceptible to radiation effects. The use of a Gonad Shield is crucial in maintaining patient safety and reducing the potential for long-term health issues, such as sterility or an increased risk of cancer, associated with unnecessary exposure to ionizing radiation.
