Report Overview

Yttrium-90 Injection is a targeted radionuclide therapy used in the treatment of liver cancer, specifically hepatocellular carcinoma. It is a radioactive isotope of the element yttrium, with the atomic number 90. The injection contains Yttrium-90 microspheres that are designed to be selectively taken up by cancerous liver cells, delivering a high dose of radiation directly to the tumor while minimizing damage to healthy tissue. This localized radiation therapy aims to destroy cancer cells and inhibit their growth. Yttrium-90 Injection is typically administered through the hepatic artery, a blood vessel that supplies the liver, allowing the microspheres to reach the tumor site effectively. The treatment is often used in conjunction with other cancer therapies, such as chemotherapy or surgery, to improve patient outcomes.
