Report Overview

The Zebra Conductive Rubber Strip is a specialized elastomeric interconnect component used primarily in electronic devices to establish reliable electrical connections between circuit boards, displays, or other components under compression. It consists of alternating layers of conductive (typically carbon or metal-filled) and insulating silicone rubber, forming a striped pattern that enables vertical conductivity while maintaining horizontal insulation. These strips are valued for their flexibility, durability, and ability to maintain stable conductivity across a wide range of temperatures and environmental conditions. They are commonly employed in applications such as LCD/LED displays, touchscreens, printers, and medical devices where repeated flexing or shock absorption is required. The product's performance is characterized by parameters like resistivity, compression force, operating temperature range, and lifespan, making it a critical component in industries demanding precision and reliability in electrical interconnects.
