Report Overview

A zero-backlash flexible coupling is a mechanical coupling designed to provide a zero-backlash (zero clearance) connection to transmit rotational motion and accurately locate the relative position between shafts. This type of coupling is typically used in applications that require high-precision and zero-backlash connections to ensure precise position control and transmission of power. These couplings usually have flexible sections, such as springs, bellows, or curved beams, that connect the shafts. These flexible sections are able to absorb small misalignments and vibrations between the shafts, ensuring precise shaft alignment and position transmission.
