Report Overview

A Zero Trust VPN Solution is a cybersecurity approach that employs a VPN (Virtual Private Network) to enforce a strict, least-privilege access control policy within an organization's network. This solution is based on the Zero Trust security model, which assumes that any user, whether inside or outside the network, should not be automatically trusted. The VPN component allows secure and encrypted remote access to the organization's resources, while the Zero Trust aspect requires continuous verification of the user's identity and the context of their request, ensuring that only authorized individuals gain access to specific resources.
