Report Overview

Zircon Opacifier is a specialized industrial product primarily used in the manufacturing of ceramics, glazes, and enamels. It is a type of ceramic pigment that provides opacity and a white, opaque appearance to the finished product. Made from a compound of zirconium, it is valued for its high refractive index, which contributes to its opacifying properties. Zircon Opacifier is known for its resistance to high temperatures, making it suitable for applications that require firing or baking processes. It is also appreciated for its chemical stability, which ensures that it does not react with other components in the glaze or enamel, thus maintaining the desired color and opacity. This product is often used by manufacturers to create a uniform, non-transparent finish on ceramic tiles, sanitary ware, tableware, and other ceramic products, enhancing their aesthetic appeal and functional properties.
