Abstracts

Acute respiratory distress syndrome (ARDS) is an acute severe lung disease. It most often develops in those admitted to an intensive care unit (ICU), and can be caused by a number of 'triggers', which include trauma to the lungs and pneumonia. ARDS is characterised by wide-spread diffuse injury to the alveolar-capillary membrane, pulmonary inflammation and increased pulmonary vascular permeability. This results in protein-rich non-cardiogenic pulmonary oedema, refractory hypoxaemia and acute respiratory failure.

This report provides the current prevalent population for Diabetic Gastroparesis across 11 Major Markets (USA, France, Germany, Italy, Spain, UK, Japan, Brazil, Poland, Turkey and Netherlands) split by gender and 5-year age cohort. Along with the current prevalence, the report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main symptoms and co-morbidities of ARDS have been quantified and presented alongside the overall prevalence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

These common ARDS signs and symptoms include:

Severity as classified by the Berlin definition

Aetiology of the lung injury

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

Reason to buy

Able to quantify patient populations in global ARDS market to target the development of future products, pricing strategies and launch plans.

Gain further insight into the prevalence of the subdivided types of ARDS and identify patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Provide a level of understanding on the impact from specific co-morbid conditions on ARDS prevalent population.

Identify sub-populations within ARDS which require treatment.

Gain an understanding of the specific markets that have the largest number of ARDS patients.

Contents

Introduction

Cause of the Disease

Risk Factors & Prevention

Diagnosis of the Disease

Disease Prognosis & Clinical Course

Methodology for quantification of patient numbers

Incidence of ARDS in Hospital Admissions to the ICU

Features of ARDS Patients

Abbreviations used in the report

Other Black Swan Analysis Publications

Black Swan Analysis Online Patient-Based Databases

Patient-Based Offering

Online Pricing Data and Platforms

References

Appendix

List Of Figures

LIST OF FIGURES

Total Hospital Admissions within the USA, compared to the total number of admissions to ICU and the total number of ARDS clinically diagnosed cases

List Of Tables

LIST OF TABLES

Incidence of ARDS in hospital admissions to the ICU, total (000s)
Incidence of ARDS in hospital admissions to the ICU, males (000s)
Incidence of ARDS in hospital admissions to the ICU, females (000s)
Severity of ARDS, total (000s)
Abbreviations and Acronyms used in the report
USA Hospital admissions by 5-yr age cohort, total (000s)
USA Hospital admissions by 5-yr age cohort, total (000s)
Poland Hospital admissions by 5-yr age cohort, total (000s)
Poland Hospital admissions by 5-yr age cohort, total (000s)
France Hospital admissions by 5-yr age cohort, total (000s)
France Hospital admissions by 5-yr age cohort, total (000s)
Germany Hospital admissions by 5-yr age cohort, total (000s)
Germany Hospital admissions by 5-yr age cohort, total (000s)
Italy Hospital admissions by 5-yr age cohort, total (000s)
Italy Hospital admissions by 5-yr age cohort, total (000s)
Spain Hospital admissions by 5-yr age cohort, total (000s)
Spain Hospital admissions by 5-yr age cohort, total (000s)
UK Hospital admissions by 5-yr age cohort, total (000s)
UK Hospital admissions by 5-yr age cohort, total (000s)
Brazil Hospital admissions by 5-yr age cohort, total (000s)
Brazil Hospital admissions by 5-yr age cohort, total (000s)
Japan Hospital admissions by 5-yr age cohort, total (000s)
Japan Hospital admissions by 5-yr age cohort, total (000s)
Turkey Hospital admissions by 5-yr age cohort, total (000s)
Turkey Hospital admissions by 5-yr age cohort, total (000s)
Netherlands Hospital admissions by 5-yr age cohort, total (000s)
Netherlands Hospital admissions by 5-yr age cohort, total (000s)
