Abstracts

It has long been established that BRCA1 and BRCA2 (BRCA1 and BRCA2 susceptibility gene) germline mutations confer a higher risk of developing ovarian or breast cancer in women that carry the mutation. However, it has also been established that BRCA1 and BRCA2 mutations also confer higher risk of developing cancers such as prostate, pancreatic, stomach and colorectal in individuals that carry the mutations.

This report provides the current prevalent population for BRCA1 & BRCA2 mutations in cancer populations across 18 Major Markets (USA, Canada, France, Germany, Italy, Spain, UK, Russia, Turkey, Saudi Arabia, Japan, China, Argentina, Brazil, Mexico, India, South Africa and Australia) split by gender and 5-year age cohort. Along with the current prevalence, the report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main cancers with BRCA1 and BRCA2 mutation have been quantified and presented alongside the overall prevalence figures.

BRCA1/2 mutations are most often associated with the following cancers:

Breast

Ovarian

Pancreatic

Prostate

Stomach

And less frequently with the following cancers:

CRC

Malignant melanoma

Kidney cancer

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

REASON TO BUY

Able to quantify patient populations in global BRCA1 and BRCA2 mutations market to target the development of future products, pricing strategies and launch plans.

Gain further insight into the prevalence of the BRCA1 and BRCA2 mutations by cancer type and identify patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Provide a level of understanding on the impact of the mutation on the prevalent population for specific cancer types.

Gain an understanding of the specific markets that have the largest number of BRCA1 and BRCA2 mutation patients.

Contents

- Introduction
- Cause of the Disease
- Risk Factors & Prevention
- Diagnosis of the Disease
- Variation by Geography/Ethnicity
- Disease Prognosis & Clinical Course
- Key Comorbid Conditions/Features Associated with the Disease
- Methodology for quantification of patient numbers
- Top-line Prevalence for BRCA1 & BRCA2 mutations in Cancer populations
- BRCA Mutations by type of cancer
- Abbreviations used in the report
