### Summary

Black Swan Analysis Epimic Epidemiology Series Forecast Report on Acne Vulgaris in 15 Major Markets

Acne, or Acne Vulgaris (AV), is a chronic inflammatory disease of the pilosebaceous unit. Although acne can develop at any age, it most commonly affects adolescents and is triggered by the overproduction of sebum in the sebaceous glands. Acne vulgaris is characterised by presence of comedones, papules, pustules, cysts, nodules and occasionally, scars. It can affect the face, anterior chest and upper back.

This report provides the current prevalent population for Acne Vulgaris across 15 Major Markets (USA, Canada, France, Germany, Russia, Italy, Spain, UK, Turkey, Poland, Australia, Japan, China, Brazil and India) split by gender and 5-year age cohort. Along with the current prevalence, the report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main symptoms and co-morbidities of Acne Vulgaris have been quantified and presented alongside the overall prevalence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

Main symptoms and co-morbidities for Acne Vulgaris include:

Underlying hormone imbalance

Puberty

Family history

Skin scarring

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

Reason to buy

Able to quantify patient populations in global Acne Vulgaris's market to target the development of future products, pricing strategies and launch plans.

Gain further insight into the prevalence of the subdivided types of Acne Vulgaris and identify patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Provide a level of understanding on the impact from specific co-morbid conditions on Acne Vulgaris's prevalent population.

Identify sub-populations within Acne Vulgaris which require treatment.

Gain an understanding of the specific markets that have the largest number of Acne Vulgaris disease patients.
