Black Swan Analysis Epiomic Epidemiology Series Forecast Report on Atrial Fibrillation in 19 Major Markets

Atrial Fibrillation (AF) is the most prevalent type of supraventricular arrhythmia. AF occurs when abnormal electric signals are sent to the atria, which cause them to contract quickly and irregularly. For many patients, the condition is largely asymptomatic, however when symptoms become bothersome and frequent, intervention is required to restore normal rhythm.

This report provides the current prevalent population for AF across 19 Major Markets (USA, Canada, France, Germany, Italy, Spain, UK, Poland, Netherlands, Russia, Turkey, Japan, China, South Korea, India, Australia, Brazil, Mexico, Argentina) split by gender and 5-year age cohort. Along with the current prevalence, the report provides an overview of the classification and patient treatment options for AF. The report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main patient features and co-morbidities of AF have been quantified and presented alongside the overall prevalence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

Main symptoms and co-morbidities for AF include:

Hypertension

CHF/CAD and other structural cardiac diseases

Diabetes

Mitral stenosis / other valvular disorders

COPD

Stroke

Rheumatic heart disease

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

Reason to buy

Ability to quantify patient populations in global AF market to target the development of future products, pricing strategies and launch plans.

Further insight into the prevalence of the subdivided types of AF and identification of patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Better understanding on the impact of specific co-morbid conditions on the prevalent population of AF patients.

Identification of AF patient sub-populations that require treatment.

Better understanding of the specific markets that have the largest number of AF patients.

Contents

INTRODUCTION

CAUSE OF THE DISEASE

RISK FACTORS & PREVENTION

DIAGNOSIS OF THE DISEASE

VARIATION BY GEOGRAPHY/ETHNICITY

DISEASE PROGNOSIS & CLINICAL COURSE

KEY COMORBID CONDITIONS / FEATURES ASSOCIATED WITH THE DISEASE

METHODOLOGY FOR QUANTIFICATION OF PATIENT NUMBERS

ADDITIONAL DATA AVAILABLE ON REQUEST

TOP-LINE PREVALENCE FOR ATRIAL FIBRILLATION

FEATURES OF ATRIAL FIBRILLATION PATIENTS

THERAPEUTIC INTERVENTIONS

COMORBIDITIES OF ATRIAL FIBRILLATION PATIENTS

ABBREVIATIONS USED IN THE REPORT

OTHER BLACK SWAN SERVICES & SOLUTIONS

REPORTS & PUBLICATIONS

ONLINE EPIDEMIOLOGY DATABASES
