Abstracts

Autoimmune haemolytic anaemia (AIHA) is an immune disorder caused by auto-antibodies against unmodified autologous red blood cells and can range in presentation from a mild illness to a rapidly fatal severe condition.

This report provides the current incident population for AIHA across 8 Major Markets (USA, France, Germany, Italy, Spain, UK, Brazil and Japan) split by gender and 5-year age cohort. Along with the current incidence, the report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main symptoms and co-morbidities of AIHA's have been quantified and presented alongside the overall incidence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

Main symptoms and co-morbidities for AIHA include:

Lymphoproliferative conditions:

CLL

HL

NHL

Myeloproliferative conditions:
Multiple myeloma

Myelofibrosis

MGUS

Autoimmune conditions:
RA

SLE

Polyarteritis nodosa

Infections:
Pneumonia & Tuberculosis

Syphilis

Epstein-Barr

Chronic active hepatitis

Mononucleosis

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

development of future products, pricing strategies and launch plans.

Gain further insight into the incidence of the subdivided types of AIHA and identify patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Provide a level of understanding on the impact from specific co-morbid conditions on AIHA’s incident population.

Identify sub-populations within AIHA which require treatment.

Gain an understanding of the specific markets that have the largest number of AIHA patients.
