## **Abstracts**

Multiple Sclerosis (MS) (also known as disseminated sclerosis) is a chronic, inflammatory demyelinating immune-mediated disease of the central nervous system (CNS). MS is characterised by the formation of lesions in the central nervous system, the destruction of the myelin sheath (insulation surrounding the nerve fibres of the CNS) and inflammation. Patients can exhibit a broad range of signs and symptoms associated with neural damage and dysfunction.

This report provides the current prevalent population for Multiple Sclerosis across 18 Major Markets (USA, Canada, France, Germany, Italy, Spain, UK, Turkey, Australia, Poland, Romania, Russia, Mexico, Argentina, Brazil, Japan, India, China) split by gender and 5-year age cohort. Along with the current prevalence, the report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main symptoms and co-morbidities of Multiple Sclerosis have been quantified and presented alongside the overall prevalence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

Main symptoms and co-morbidities for Multiple Sclerosis include:

Osteoporosis

Osteopenia

Diabetes

Hyperlipidaemia

Hypertension

Uveitis

Muscle stiffness or spasms

Paralysis (typically of the legs)

Problems with the bladder/bowel/sexual function

Mental changes (forgetfulness/mood swings)

Depression

Epilepsy

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

Reason to buy

Able to quantify patient populations in global Multiple Sclerosis market to target the development of future products, pricing strategies and launch plans.

Gain further insight into the prevalence of the subdivided types of Multiple Sclerosis and identify patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Provide a level of understanding on the impact from specific co-morbid

conditions on Multiple Sclerosis prevalent population.

Identify sub-populations within Multiple Sclerosis which require treatment.

Gain an understanding of the specific markets that have the largest number of Multiple Sclerosis patients.
