Abstracts

Leukaemia refers to a group of cancers which originate in the bone marrow; they result in the overproduction of abnormal white blood cells. This limits the bone marrow's ability to produce normal and fully mature white blood cells. Leukaemia classification is based on the speed of disease progression and the type of cells involved. The main subtypes are myeloid and monocytic, lymphoid or other; these can then be further subdivided into groups such as 'Acute' or 'Chronic'. Acute and chronic refer to the speed of disease progression. Whereas, myeloid, monocytic and lymphoid refer to the cell type affected.

This report provides the current incidence population for Leukaemia across 18 Major Markets (USA, Canada, France, Germany, Italy, Spain, UK, Brazil, Japan, India, China, Turkey, Mexico, Russia, Argentina, Australia, Saudi Arabia and South Africa) split by gender and 5-year age cohort. Along with the current incidence, the report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main symptoms and co-morbidities of Leukaemia have been quantified and presented alongside the overall incidence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

Main symptoms and co-morbidities for Leukaemia include:

Haemolytic Anaemia

Diabetes

Frequent infections

Headaches

Cachexia

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

Reason to buy

Able to quantify patient populations in global Leukaemia market to target the development of future products, pricing strategies and launch plans.

Gain further insight into the incidence of the subdivided types of Leukaemia and identify patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Provide a level of understanding on the impact from specific co-morbid conditions on Leukaemia incident population.

Identify sub-populations within Leukaemia which require treatment.

Gain an understanding of the specific markets that have the largest number of Leukaemia patients.

Contents

- Introduction
- Cause of the Disease
- Risk Factors & Prevention
- Diagnosis of the Disease
- Variation by Geography/Ethnicity
- Disease Prognosis & Clinical Course
- Key comorbid conditions associated with the disease
- Methodology for quantification of patient numbers
- Top-line prevalence for Multiple Sclerosis
 - Diagnosis certainty
- Features of Multiple Sclerosis patients
 - Multiple Sclerosis Subtype
 - Disability severity
 - Abdominal pain
 - Sleep problems
 - Spasticity
 - Urinary and bladder problems
- Comorbidities in Multiple Sclerosis patients
 - Features of MS patients with relapsing- remitting MS
 - Features of MS patients with Secondary Progressive MS
 - Features of MS patients with Primary Progressive MS
 - Features of MS patients with Primary Relapsing MS
- Abbreviations used in the report
- Other Black Swan Analysis Publications
