Black Swan Analysis Epiomic Epidemiology Forecast Report on Schizophrenia in 27 Major Markets

Schizophrenia is a mental illness characterised by psychosis, apathy and withdrawal, as well as cognitive impairment. It usually develops between late adolescence and young adult age and although no significant differences in the prevalence of schizophrenia have been observed between men and women overall, there are differences in age at onset and tendency to present certain symptoms. Schizophrenia constitutes a significant burden to social and professional life, with more severe forms also causing basic self-care problems. With its life-long duration, it is one of the leading causes of long-term disability worldwide.

This report provides the current prevalent population for schizophrenia across 27 Major Markets (USA, Canada, France, Germany, Italy, Spain, UK, Poland, Netherlands, Belgium, Norway, Sweden, Finland, Denmark, Austria, Switzerland, Ireland, Russia, Turkey, Japan, China, South Korea, India, Australia, Brazil, Mexico, Argentina) split by gender and 5-year age cohort. In addition to the current prevalence, the report provides an overview of the risk factors, diagnosis and prognosis of the disease, along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, the main comorbidities of the disease have been quantified and presented alongside the overall prevalence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

Main symptoms and co-morbidities of schizophrenia include:

Diabetes mellitus

Cardiopulmonary, metabolic, gastrointestinal and malignant diseases

Abuse of psychoactive substances

Sexually-transmitted diseases

Psychosocial stress

Adverse effects of antipsychotics

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world-class sources that deliver the most up-to-date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

Reason to buy

Ability to quantify patient populations in global schizophrenia market to target the development of future products, pricing strategies and launch plans.

Further insight into the prevalence of the subdivided types of schizophrenia and identification of patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Better understanding of the impact of specific co-morbid conditions on the prevalent population of schizophrenia patients.

Identification of schizophrenia patient sub-populations that require treatment.

Better understanding of the specific markets that have the largest number of schizophrenia patients.

Contents

INTRODUCTION

CAUSE OF THE DISEASE

RISK FACTORS & PREVENTION

DIAGNOSIS OF THE DISEASE

VARIATION BY GEOGRAPHY/ETHNICITY

DISEASE PROGNOSIS & CLINICAL COURSE

KEY COMORBID CONDITIONS / FEATURES ASSOCIATED WITH THE DISEASE

METHODOLOGY FOR QUANTIFICATION OF PATIENT NUMBERS

TOP-LINE PREVALENCE FOR SCHIZOPHRENIA

COMORBIDITIES OF SCHIZOPHRENIA PATIENTS

ABBREVIATIONS USED IN THE REPORT
