Black Swan Analysis Epiomic Epidemiology Forecast Report on Thyroid Cancer in 21 Major Markets

Thyroid cancer is a cancer originating from follicular or parafollicular thyroid cells. It is a relatively rare cancer, but the most common of the endocrine system. The main clinical split is between differentiated and undifferentiated tumour types, with the majority being well-differentiated.

This report provides the current incident population for thyroid cancer across 21 Major Markets (USA, Canada, France, Germany, Italy, Spain, UK, Poland, Netherlands, Russia, Turkey, Saudi Arabia, South Africa, Japan, China, South Korea, India, Australia, Brazil, Mexico, Argentina) split by gender and 5-year age cohort. In addition to the current incidence, the report provides an overview of the risk factors, diagnosis and prognosis of the disease, along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several features of thyroid cancer patients, as well as the main symptoms and comorbidities of the disease have been quantified and presented alongside the overall incidence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

Main symptoms and co-morbidities of thyroid cancer include:

Familial Adenomatous Polyposis

Acromegaly

Diabetes

Multiple endocrine neoplasia syndromes

Sipple syndrome

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up-to-date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

Reason to buy

Ability to quantify patient populations in global thyroid cancer market to target the development of future products, pricing strategies and launch plans.

Further insight into the incidence of the subdivided types of thyroid cancer and identification of patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Better understanding of the impact of specific co-morbid conditions on the incident population of thyroid cancer patients.

Identification of thyroid cancer patient sub-populations that require treatment.

Better understanding of the specific markets that have the largest number of thyroid cancer patients.

Contents

INTRODUCTION

CAUSE OF THE DISEASE

RISK FACTORS & PREVENTION

DIAGNOSIS OF THE DISEASE

VARIATION BY GEOGRAPHY/ETHNICITY

DISEASE PROGNOSIS & CLINICAL COURSE

KEY COMORBID CONDITIONS / FEATURES ASSOCIATED WITH THE DISEASE

METHODOLOGY FOR QUANTIFICATION OF PATIENT NUMBERS

ADDITIONAL DATA AVAILABLE ON REQUEST

TOP-LINE INCIDENCE FOR THYROID CANCER

FEATURES OF THYROID CANCER PATIENTS

PAPILLARY THYROID CANCER PATIENTS

COMORBIDITIES OF THYROID CANCER PATIENTS

ABBREVIATIONS USED IN THE REPORT

OTHER BLACK SWAN SERVICES & SOLUTIONS
