Abstracts

An epiretinal membrane (ERM) is a thin sheet of fibrous tissue that develops on the surface of the macula and can cause problems with central vision.

This report provides the current prevalent population for Epiretinal Membrane across 12 Major Markets (USA, Canada, France, Germany, Italy, Spain, UK, Brazil, Japan, India, Australia and China) split by gender and 5-year age cohort. Along with the current prevalence, the report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main symptoms and co-morbidities of Epiretinal Membrane have been quantified and presented alongside the overall prevalence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

The following are considered risk factors for developing ERMs:

Age (65+)

Cataract surgery

Other eye surgery

Posterior uveitis

Eye diseases

Retinal tear/detachment

Vitreomacular adhesion and traction

Diabetic retinopathy

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

Reason to buy

Able to quantify patient populations in global Epiretinal Membrane market to target the development of future products, pricing strategies and launch plans.

Gain further insight into the prevalence of the subdivided types of Epiretinal Membrane and identify patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Provide a level of understanding on the impact from specific co-morbid conditions on Epiretinal Membrane's prevalent population.

Identify sub-populations within Epiretinal Membrane which require treatment.

Gain an understanding of the specific markets that have the largest number of Epiretinal Membrane patients.
