Abstracts

Type 1 Diabetes Mellitus (T1DM) is a multisystem disease that progressively destroys the pancreas' ability to produce insulin. This leads to a chronic condition of defective metabolism of fat, carbohydrates and proteins due to the lack of insulin. It occurs mainly in childhood and adolescents, however a rising number of latent autoimmune diabetes of adulthood (LADA) cases have been reported mainly due to a better understanding and diagnosis of the disease.

This report provides the current prevalent population for Type 1 Diabetes Mellitus across 12 Major Markets (USA, Canada, France, Germany, Italy, Spain, UK, Brazil, Japan, India, China and Russia) split by gender and 5-year age cohort. Along with the current prevalence, the report also contains a disease overview of the risk factors, disease diagnosis and prognosis along with specific variations by geography and ethnicity.

Providing a value-added level of insight from the analysis team at Black Swan, several of the main symptoms and co-morbidities of Type 1 Diabetes Mellitus have been quantified and presented alongside the overall prevalence figures. These sub-populations within the main disease are also included at a country level across the 10-year forecast snapshot.

There are many co-morbidities associated with Type 1 Diabetes Mellitus, including:

Chronic pancreatitis

Cystic fibrosis

Autoimmune disorders

Hyperglycaemia

Heart and blood vessel diseases (MI, Stroke, Atherosclerosis, Hypertension, Angina)

Neuropathy

Nephropathy (leading to CKD)

Ulcerations

Eye damage (retinopathy)

Foot damage

Ketoacidosis

Lower limb amputation

Skin/Mouth conditions

Pregnancy complications

This report is built using data and information sourced from the proprietary Epiomic patient segmentation database. To generate accurate patient population estimates, the Epiomic database utilises a combination of several world class sources that deliver the most up to date information from patient registries, clinical trials and epidemiology studies. All of the sources used to generate the data and analysis have been identified in the report.

REASON TO BUY

Able to quantify patient populations in global Type 1 Diabetes Mellitus market to target the development of future products, pricing strategies and launch plans.

Gain further insight into the prevalence of the subdivided types of Type 1

Diabetes Mellitus and identify patient segments with high potential.

Delivery of more accurate information for clinical trials in study sizing and realistic patient recruitment for various countries.

Provide a level of understanding on the impact from specific co-morbid conditions on Type 1 Diabetes Mellitus prevalent population.

Identify sub-populations within Type 1 Diabetes Mellitus which require treatment.

Gain an understanding of the specific markets that have the largest number of Type 1 Diabetes Mellitus patients.
