BMI View: Botswana will remain a net electricity importer throughout our forecast period until 2024 due to an underperforming power sector and constant delays to the construction of power plants. Increased interest by IPPs will be the result of government seeking to address current power issues.

Latest Updates And Structural Trends

The planning of a USD4.5bn coal-to-liquid fuels, fertiliser and power plant has been announced by United Refineries Botswana, which will be run through its Coal Petroleum unit, and South African company, Kumvest. The technical partner for the plant will be the South African-based Holland and Hausberger. The plant is expected to deliver 304MW of electricity and is slated to be completed by 2020.

The South African Power Pool (SAPP) said it plans to build a power transmission line between Botswana and South Africa to enhance connectivity and electricity trading between the two countries.

The government announced it plans to acquire IPPs for the construction of two 50MW solar power plants, to supply power to the mines at Jwaneng and Maun.
