BMI View: We believe that grains production growth over the next five years will slow relative to the preceding five.

In particular, corn production will lose acreage to soybean and see negative growth in 2015/16.

Soybean production will outpace that of corn, as lower production costs for soybean relative to corn will make the commodity more attractive to grow.

However, we see limited growth out to 2018/19 given the scarcity of area available for expansion as well as high import costs for fertilisers.

We also see strong growth in the livestock and dairy sectors, as these will continue to benefit from Russia's ban on imports of US products, which has been extended to August 2016.

We hold a more positive view on the sugar industry now than we have held in the past, due to reforms in the ethanol sector and the significant depreciation in the real over the past several months.

Real weakness will be a net positive for the country's agricultural sector.

Key Forecasts

Soybean production growth 2014/15 to 2018/19: 1.6% to 96.0mn tonnes. We see limited growth out to 2018/19 given the scarcity of area available for

expansion, as well as high import costs for fertilisers.

Poultry consumption growth to 2019: 15.0% to 10.7mn tonnes. A growing middle class and the general preference for poultry over all other meat groups because of its health properties and lower prices will encourage demand growth.

Beef production growth to 2018/19: 9.8% to 10.4mn tonnes. Reduced cattle availability will weigh on beef production until 2016/17, as increasing cattle supply will take time (a period of 30 months is required from birth to slaughter).
