Date: March 2016

Pages: 75

Price: US\$ 1,295.00 (Single User License)

ID: F47D3944A7DEN

Abstracts

Includes 3 FREE quarterly updates

The fundamentals of the French petrochemicals market are mixed. The decline in France's industrial competitiveness over the last ten years is a fundamental issue facing the country. However, domestic automotive producers have made significant steps to improve their competitiveness, which should help assist with bolstering demand in engineering plastics. France's petrochemicals industry has undergone a process of structural adjustment to improve cost margins.

However, it has been behind the curve compared to other Western European states that have seen consolidation and capacity reductions in recent years. Resistance from labour unions has largely been responsible for the slow process of dealing with the sector's lack of integration and poor economies of scale. However, delocalisation is inevitable for the petrochemicals industry, just as it is across the industrial sector.
