## Abstracts

### Core Views

In 2014, we remain relatively less sanguine on the back of expectations of a slowing in China's economy and a correction within the property market that will adversely affect a substantial part of Hong Kong's economy. As a result, we are maintaining our below-consensus (3.5%) real GDP growth forecast of 3.0% in 2014.

Hong Kong's property market appears to be the nascent stages of a correction, which falls in line with our expectations. While we are of the view that this is just the start of the correction and that further price declines are likely to be in order, we expect the correction to remain moderate. We highlight that the shifting of mainland investor interest out of Hong Kong, if sustained, represents a salient downside risks. However, we point out that continuing supply-side woes carry upside risks to the expected correction.

Hong Kong has been witnessing increasing incidences of costoverruns in the city's massive public infrastructure projects in recent years. This is due in no small part to the government's penchant for utilising public infrastructure spending to bolster the economy in times of a slowdown. The glut of projects in recent years has led to a labour shortage which has in turn driven up wage costs. While the recent spate of cost blowouts and a slowing economy have led to concerns regarding the city's fiscal profile, we believe that the government's fiscal prudence and the huge fiscal reserves that it has built up over the years will help it to cushion any deterioration in its fiscal position.

Hong Kong's political environment appears to be becoming increasingly divisive and we stress that if Beijing is seen to be interfering with the running of the city, Hong Kong may gradually lose its preeminence as a global financial centre.

## **Key Risks To Outlook**

Downside Risk To 2014 Growth Forecast: Should the mainland economy experience a sharper-than-expected slowdown the ripple effect on Hong Kong means that its economy would be disproportionately affected.

Executive Summary  
Core Views  
Key Risks To Outlook

### CHAPTER 1: POLITICAL OUTLOOK

SWOT Analysis  
BMI Political Risk Ratings  
Domestic Politics  
Tough Road Ahead Towards Universal Suffrage

While the government has taken the first step in its endeavour to achieve universal suffrage by starting a five-month public consultation on direct elections, its path towards electoral reforms is likely to be fraught with challenges. Chief Executive Leung Chun-ying's administration will have to tread carefully to ensure that the new political system pacifies both the pan-democrats, whose support it needs, as well as Beijing, whose approval it requires. Meanwhile, Hong Kong's political environment appears to be becoming increasingly divisive and we stress that if Beijing is seen to be interfering with the running of the city, Hong Kong may gradually lose its pre-eminence as a global financial centre.

Table: Political Overview  
Long-Term Political Outlook

Benign Outlook Despite Democratic Reform Uncertainty

While we believe Hong Kong will remain at or near the top of our political risk ratings table over the next decade, a number of risks could lead to rising political instability. The sluggish pace of democratic reforms will continue to cause anger among pro-democracy supporters, and there is the potential for large-scale public protests. A lack of affordable housing and rising income inequality also could pose threats to social stability.

### CHAPTER 2: ECONOMIC OUTLOOK

SWOT Analysis  
BMI Economic Risk Ratings  
Economic Activity  
China, Property Set To Hit 2014 Growth

Despite Hong Kong's economy underperforming in Q313, we remain relatively constructive on its economic growth through the rest of the year as the region benefits from a transitory bounce in economy activity. Going into 2014, we remain less optimistic

on the back of expectations of a slowing in China's economy and a correction within the property market that will adversely affect a substantial part of Hong Kong's economy. As a result, we are maintaining our below-consensus (3.5%) real GDP growth forecast of 3.0% in 2014.

#### Table: ECONOMIC ACTIVITY

##### Fiscal Policy

##### Still In Rude Health Despite Construction Cost Blowouts

Hong Kong has been witnessing increasing incidences of cost-overruns in the city's massive public infrastructure projects in recent years. This is due in no small part to the government's penchant for utilising public infrastructure spending to bolster the economy in times of a slowdown. The glut of projects in recent years has led to a labour shortage which has in turn driven up wage costs. While the recent spate of cost blowouts and a slowing economy have led to concerns regarding the city's fiscal profile, we believe that the government's fiscal prudence and the huge war chest of fiscal reserves that it has built up over the years will help it to cushion any deterioration in its fiscal position.

#### Table: FISCAL POLICY

##### Monetary Policy

##### Correction Underway, But No Collapse On The Cards

Hong Kong's property market appears to be in the nascent stages of a correction, which falls in line with our expectations. While we are of the view that this is just the start of the correction and that further price declines are likely to be in order, we expect the correction to remain moderate. We highlight that the shifting of mainland investor interest out of Hong Kong, if sustained, represents a salient downside risk. However, we point out that continuing supply-side woes carry upside risks to the expected correction.

#### Table: MONETARY POLICY

##### Export Weakness Still Expected In 2014 In Spite Of China's Surge

Given that re-exports comprise the vast majority of Hong Kong's overall external shipments, the city-state's trade prospects remain inextricably tied to regional and global economic conditions. In light of our expectations for the recent surge in Chinese (and, indeed, Northeast Asia) exports to falter over the coming year, we therefore believe that Hong Kong's trade outlook for 2014 is similarly underwhelming, and expect export growth for the year to decline to 7.3% from an estimated 7.6% in 2013.

#### Table: CURRENT ACCOUNT

## CHAPTER 3: 10-YEAR FORECAST

### The Hong Kong Economy to 2023

### Integration With Mainland Key To Growth

Hong Kong's long-term outlook remains reasonably bright. While a developed economy, increased cooperation between Hong Kong and China offers a unique opportunity for the Special Administrative Region to benefit from the Mainland to further drive economic growth. We therefore expect Hong Kong to resume its strong economic expansion over the coming years and average 3.5% real GDP growth over the next decade. However, Hong Kong needs to maintain its competitive edge or risk being overshadowed by fast-rising Chinese cities.
