### Core Views

**Kazakhstan:** Kazakhstan's economic outlook over the years ahead remains fairly robust by global standards, as the country continues to export vast quantities of oil. However, the devaluation of the tenge in February 2013 will suppress private consumption in the short term, and long-term risks remain regarding Kazakhstan's lack of productivity and cost competitiveness given the economy's reliance on hydrocarbons.

**Kyrgyzstan:** The Kyrgyz government will be hard pushed to contain nationalist sentiment and inter-ethnic tensions as economic challenges increase in 2014. We expect political opposition to use slower growth and likely currency depreciation as a source of criticism of President Almazbek Atambayev's leadership.

**Tajikistan:** Tajikistan faces a very precarious political future, with geopolitical and economic uncertainties set to increase over the next few years. The US troop withdrawal from Afghanistan, an overreliance on aluminium exports and persistent threat of armed conflict with neighbouring Kyrgyzstan will all limit the country's economic development and investment potential, in turn exacerbating domestic political tensions.

**Turkmenistan:** Turkmen real GDP growth will remain strong in 2014 and 2015, as increasing gas exports to China combine with rising fixed investment surrounding the Turkmenistan-Afghanistan-

Pakistan-India gas pipeline project. We highlight that the state's domination of industry and the closed nature of the economy will continue to hold back Turkmenistan's business environment from any notable improvement.

Uzbekistan: Uzbekistan will continue to see strong real GDP growth in the coming years relative to regional averages, driven by commodity exports, robust government investment expenditures and generous social transfers that support household purchasing power. However, with key commodity prices remaining well below previous years' levels and major export markets poised for a prolonged slowdown, Uzbekistan's regional outperformance will gradually narrow. We forecast real GDP growth to average 6.2% over 2014-2018, from an estimated 8.3% in 2007-2013.

### **Major Forecast Changes**

On the back of increasing gas exports to China, we have revised our forecast for the headline rate of real GDP growth in Turkmenistan to climb to 10.7% in 2014, before falling to 9.8% in 2015. We previously forecast growth of 9.8% and 8.9% in 2014 and 2015 respectively. We forecast real GDP growth in Uzbekistan to average 6.2% over 2014-2018, from an estimated 8.3% in 2007-2013.

### **Key Risks To Outlook**

The key risk facing the Turkmen economy in the years ahead, and over the long term, is that of Chinese demand for gas falling. We remain below-consensus on our outlook for the Chinese economy in the years ahead, and if we see a sharper-than-expected contraction in economic activity there, it would undoubtedly hurt Turkmen real GDP growth. Indeed, there is a mutual dependence between the two economies with regard to China providing export revenues in exchange for Turkmenistan's natural gas. With economic fortunes in the region tied so strongly to the production/ extraction and export of commodities, a fall in the price of oil, gold, cotton or aluminium could result in significant downward revisions to our real GDP growth forecasts over the course of 2014 and 2015.

Key Risks To Outlook

### **CHAPTER 1.1: POLITICAL OUTLOOK – KAZAKHSTAN**

#### Domestic Politics

Devaluation Risks Raising Public Tensions the devaluation of the Kazakh tenge in February risks stoking political tensions in the Central Asian state, with the main losers from the move set to be consumers, who will see prices for food and consumer goods rise.

Table: Kazakhstan – Political Overview

### **CHAPTER 1.2: ECONOMIC OUTLOOK – KAZAKHSTAN**

#### Economic Activity

#### Devaluation Only A Sticking Plaster

Kazakhstan's economic outlook for the years ahead remains fairly robust by global standards, as the country continues to export vast quantities of oil.

Table: Kazakhstan – economic activity

### **CHAPTER 1.3: 10-YEAR FORECAST – KAZAKHSTAN**

#### the Kazakh Economy To 2023

Developing Non-Oil Sectors Key To Sustaining Growth the Kazakh government's drive to diversify the non-oil sector and invest in developing strategic industries and national infrastructure supports our favourable long-term outlook for the economy.

### **CHAPTER 1.4: BUSINESS ENVIRONMENT – KAZAKHSTAN**

#### Business Environment Outlook

### **CHAPTER 2.1: POLITICAL OUTLOOK – KYRGYZSTAN**

#### Domestic Politics

Tough Year Ahead For Government the Kyrgyz government will be hard pressed to contain nationalist sentiment and inter-ethnic tensions as economic challenges increase

in 2014.

Table: Kyrgyzstan – Political Overview

## **CHAPTER 2.1: ECONOMIC OUTLOOK – KYRGYZSTAN**

### Economic Activity

Growth Too Dependent On Gold the Kyrgyz economy is set to benefit substantially from increased Chinese investment in public and energy infrastructure over the coming years.

Table: Kyrgyzstan – Economic activity

## **CHAPTER 3.1: POLITICAL OUTLOOK – TAJIKISTAN**

### Domestic Politics

#### Political Risks Rising In 2014

Tajikistan faces a very precarious political future, with geopolitical and economic uncertainties set to increase over the next few years. the US troop withdrawal from Afghanistan, an over-reliance on aluminium exports and the persistent threat of armed conflict with neighbouring Kyrgyzstan will limit the country's economic development and investment potential, in turn exacerbating domestic political tension.

Table: Tajikistan – Political Overview

## **CHAPTER 3.2: ECONOMIC OUTLOOK – TAJIKISTAN**

### Economic Activity

Dependence On Energy Imports And Remittances Key Vulnerabilities the Tajik economy remains highly dependent on imports (especially energy), remittances inflows and one export commodity: aluminium. As such, fluctuations in aluminium prices and the Russian economy (its key source of remittances inflows) remain key vulnerabilities.

Table: Tajikistan – economic activity

## **CHAPTER 4.1: POLITICAL OUTLOOK – TURKMENISTAN**

### Domestic Politics

#### End To Subsidies Could Fuel Unrest

Turkmenistan's government is set to scale back the gas subsidy programme provided to the general population in 2014, a move we believe could result in an increase in public unrest. However, we do not see this as a threat to President Gurbanguly Berdimuhamedov's presidency given the widespread influence the regime, and its

security services, have in both public and private life in Turkmenistan.

Table: Turkmenistan – Political Overview

## **CHAPTER 4.2: ECONOMIC OUTLOOK – TURKMENISTAN**

Economic Activity

Gas Boost To Sustain High Growth

Turkmen real GDP growth will remain strong in 2014 and 2015 on the back of an increase in gas exports to China as well as rising fixed investment surrounding the Turkmenistan-Afghanistan-Pakistan-India gas pipeline project. We highlight that the state's domination of industry and the closed nature of the economy will continue to hold back Turkmenistan's business environment from any no

Table improvement.

Table: Turkmenistan – Economic activity

## **CHAPTER 5.1: POLITICAL OUTLOOK – UZBEKISTAN**

Domestic Politics

Karimov Keen To Retain Power

Despite ongoing speculation surrounding potential successors to Uzbek President Islam Karimov, the precarious political environment will encourage him to remain in power following the 2015 presidential election. Nevertheless, uncertainty over policy trajectory beyond

Karimov will continue to damage the country's investment profile.

Table: Uzbekistan – Political Overview

## **CHAPTER 5.2: ECONOMIC OUTLOOK – UZBEKISTAN**

Economic Activity

Growth Poised For Long-Term Decline

While remaining robust, we expect real GDP growth in Uzbekistan to slow in the coming years on the back of lower commodity prices and weaker growth in key export markets. Nevertheless, natural resource wealth will continue to provide the government with ample fiscal space to prop up economic activity. We forecast real GDP growth to slow to 6.6% and 6.2% in 2014 and 2015 respectively, from an estimated 7.2% in 2013.
