BMI View: Progress in the implementation of power sector reforms - with the wholesale electricity market set to be launched and the state utility CFE in the process of being unbundled - support our positive outlook for Mexican power market. These reforms, coupled with solid macroeconomic fundamentals, vast public investment plans and a generally supportive regulatory environment for renewables, will create business opportunities for private investors - with the natural gas, wind and infrastructure sectors to outperform.

### Latest Updates And Structural Trends

In January 2016, Mexico's Ministry of Energy (the Secretaría de Energía, Sener) published on the country's official gazette a piece of regulation outlining the separation of state-controlled utility Comisión Federal de Electricidad (CFE) in a number of independent companies that will carry out the activities of power generation, transmission, distribution and commercialisation - previously concentrated in the CFE. The creation of these subsidiaries, which will have operational independence from each other, is expected to be completed within H116.
