BMI View: Thailand will maintain its status as a key Asian agricultural provider in the coming years, as the sector boasts strong export opportunities and government support as well as an efficient food producing industry. The sugar and livestock sectors hold promising growth stories. However, the government's interference in the market, especially in the rice sector, will hinder the competitiveness of Thai production compared to its Asian rivals. Rice production will face downward pressure as the government incentivises farmers to switch away from rice towards other crops, mainly sugarcane, in a bid to curb oversupply of rice. That said, Thailand will likely regain its status as the world's largest rice exporter as the government seeks to clear out its rice stockpile by 2016.

Key Forecasts

Sugar production growth to 2019/20: 12.8% to 12.2mn tonnes. Production will be supported by the government's goal to incentivise rice farmers to switch to the cultivation of other crops, mainly sugarcane. Sugar output will also be driven mainly by strong sugarcane yield improvements, improved sugar recovery from cane and strong export opportunities.
