## Abstracts

Includes 3 FREE quarterly updates

**BMI View:** We maintain a relatively robust growth outlook for UK IT spending over the medium term in the Q116 update, with spending growth expected to outperform most other developed European markets with a CAGR of 3.4% over 2016-2019. The stronger economic environment is a key differentiator with other Western European markets, while the large financial sector will also make the UK a lucrative market for advanced software and services vendors. Market development will however be uneven, and we envisage a stagnant hardware market, while growth will be driven by areas such as the app economy, cloud computing and emerging technologies such as the Internet of Things and Big Data analytics.

### Latest Updates & Industry Developments

**Computer Hardware Sales:** GBP19.7bn in 2016 to GBP20.2bn in 2019, CAGR of +0.5% in local currency terms. Market maturity means limited volume growth prospects, while the decline in desktop spending will partially offset a return to growth in the notebook and tablet markets.

**Software Sales:** GBP14.1bn in 2016 to GBP16.1bn in 2019, a CAGR of +4.4% in local currency terms. Complex enterprise software demand is growing in the financial services vertical, with SaaS SME demand another important growth area for software vendors.

**IT Services Sales:** GBP26.5bn in 2016 to GBP30.9bn in 2019, CAGR of +5.0% in local currency terms. A deepening of the cloud computing market will be the

key pillar of IT services spending growth outperformance, while smart services will also make a significant contribution in the later years of the forecast.
