Highlights

6-APA is an important medical intermediate, and it is mainly used to antibiotics, such as amoxicillin and ampicillin, etc.

6-APA production was mainly distributed in China, India and Europe. China producers have produced 6-APA for over 10 years. About 4,000 ton of 6-APA was produced in China in 2002.

The development of production technology of 6-APA was fast and the product quality was improved accordingly in China. At present domestic production technology of 6-APA is mature and the quality of homemade 6-APA is similar to that of imported product.

There are two production method including one step chemical method and two step enzyme method. Most domestic producers employ the later because of its good quality and short reacting time.
