Aspartame, as an important non-caloric high intensity sweetener, has already been comprehensively applied in the world, although there were ever disputes about its potential harm to people's health. In China, it is usually used to produce compound sweeteners together with ACK and saccharin.

Now, China has already become an important player in this industry. The number of China's aspartame manufacturers has kept growing for years. Meanwhile, both the capacity & production of aspartame has increased a lot. Now most of Chinese aspartame is exported to the overseas countries.

At the same time, China also imports some aspartame from abroad. With the growth of the aspartame industry, the market share of the imported aspartame will possibly become even less in Chinese market.

This report delivers an in-depth and comprehensive analysis on aspartame and high intensity sweeteners. It carefully researches all the facets of aspartame, including production, consumption and import & export, etc.
