Abstracts

Export rebate is widely used in the world as a method to make domestic products competitive among other countries' products in the international markets. China's export rebate adjustments always drew global attention, as China is one of export superpowers in the world, affecting the global markets.

China has adjusted export rebate rate for 4 times both in 2008 and 2009 due to global financial crisis, drawing attention from overseas countries wanting to know what will be in next Chinese export rebate rate adjustment.

By doing an investigation on the China's export rebate system, CCM is trying to know:

What were the past adjustments?

Which industries' export rebate rate will be likely to be adjusted and why?

How about the influence of export rebate on export and GDP?

What factors will drive China to adjust export rebate rate?

What will the future trend of China's export rebate rate be?

Contents

Executive summary
Introduction & methodology

I OVERVIEW OF EXPORT REBATE IN CHINA

I-1 Relationship between export rebate value and GDP/Export value
I-2 Influencing of export rebate on export volume
I-3 Characteristics of China's export rebate rate
