## Abstracts

Crop Farming China News provides you with real-time intelligence on China's agricultural commodities markets.

It is a monthly published newsletter, which can be downloaded in PDF format. The subscription period is yearly, grants the subscriber 12 issues in total.

Chinese agriculture is undergoing rapid reform as China attempts to increase yields while also reducing pollution and mitigating the impact of the country's rapid urbanization on land availability.

There are also signs of a gradual shift in the government's priorities as previous concerns over self-sufficiency are weighed against the possible benefits of market liberalization. Any change in policy could have far-reaching effects on commodities markets not just in China but across the world.

Crop Farming China Newswill help you stay ahead of the game in this fast-changing market with real-time reporting on the entire agriculture industry chain, from seed markets to the downstream food and feed markets. This includes:

Breaking news from China and abroad

The latest market data, including commodity price information, import/export data, production, yields, impact of pests, diseases and extreme weather, etc.

In-depth analysis of market trends, Chinese government policy, M&A, new technologies, and more

Expert commentary from industry insiders, including regular guest articles and

interviews with insiders at leading Chinese companies, associations and government organizations

## HEADLINE

MAP and DAP prices continued mounting all around the world due to tight supplies. Global demands for phosphate fertilisers in South Asia are predicted to remain strong and export prices are likely to maintain stability while showing a tendency to edge up.

At the 13th High-level Forum on China Pesticide held on 7 Sept., Wei Qiwen, ICAMA's Director gave an authoritative interpretation of China's prevention and control of crop diseases and pests and the trend forward. At present, there are more than 1,600 kinds of creatures that can cause harm to crops in China, including over 830 pests, 720 diseases, 60 weeds, and 20 rodents. Along with rapid agricultural modernisation, agricultural production is becoming more and more intensive. However, due to climatic conditions and farming patterns, crop pests, weeds and diseases are causing heavier damage year by year in China.

Hebei Xingbai expected to start the construction of its 100 t/a green and super-efficiency monosulfuron TC and 500 t/a green and super-efficiency monosulfuron-ester TC and formulation project in Aug., 2021, based on the progress of administrative procedures and other factors. The construction will last for 24 months to Aug., 2023. Notably, some projects related to prominent herbicides developed domestically such as quintrione, quinotrione, cypyrafluone, bipyrazone, fenpyrazone and tripyrasulfone have started constructions or are going through administrative procedures and will begin construction soon, besides monosulfuron and monosulfuron-ester.

Jiamusi Heilong plans to launch a 1,500 t/a 3-isochromanone and 700 t/a M325 project in its existing plant area in Huaxi Industrial Park, Huachuan County. Construction of the project lasts from Sept. to Dec., 2020. Capacities of 1,500 t/a 3-isochromanone and 700 t/a M325 that are pesticide intermediates will be formed once the project completed.

This year, corn farmers and soybean farmers in Heilongjiang Province will receive subsidies of USD83.21/ha and USD521.18/ha respectively, while in Dongfeng County of Jilin Province, subsidies will be USD214.57/ha and USD656.96/ha respectively – and that county's figures are predicted to be in line with other counties/cities in the province.

## Contents

Headline

Editor's Note

Column 1 Market Dynamics

Mechanization increases efficiency of fresh corn planting

Prices of phosphate fertilisers grow globally

Spodoptera frugiperda invades Liaoning Province for first time

National Soil Moisture Content Conference for Autumn and Winter Seed 2020 held in Xi'an

Current status and trends of crop pests and diseases control in China

New version of remote-sensing plant diseases and pests monitoring and forecasting system released

2 products are approved for treating spodoptera frugiperda in China

Obvious trend of rice planthopper outbreak on late rice is seen

Column 2 Company Dynamics

Production capacities of independently-developed prominent herbicides expanded constantly

Merger and reorganization of Sinochem and ChemChina being underway

Jiamusi Heilong to expand production capacity of pesticide intermediate

Subsidiary of Sino-Agri Leading penalized for unlicensedly selling paraquat

Column 3 Policy Dynamics

Heilongjiang grants corn farmers subsidies of USD83.21/ha

MOA deploys work of autumn grain rush-harvest

MOA to strengthen specific rectification measures of paraquat

List of Category I Crop Pests and Diseases released

Fifth National Committee of Quarantine Harmful Organism on Plants established

MOA to increase financial support to pests and diseases prevention in border areas
