After thirty years' development, the production of cyclohexylamine now in China becomes mature, including the technology and the industrial chain. As a downstream product of aniline, its market price is mainly based on aniline's price. In China, it is mainly used to produce cyclamate and CBS, different from situation abroad. In the previous years, the output and application have been steadily growing in the past years.

Since 2001, the cyclamate business and CBS business turned good, pushing the cyclohexylamine industry developing faster than before. However, the situation now is still serious for cyclohexylamine producers, for the low profit and simple application fields.

As China's CHA's downstream industry is largely subject to the export, cyclohexylamine production in China is closely related to the development of the global market. cyclohexylamine production was ever affected by the world economic depression, or the anti-dumping charges, which were mainly imposed on China's cyclamate and CBS by Europe and India, etc.

In China, the production and consumption of cyclohexylamine has been steadily increasing for the past few years. According to CCM's investigation, this situation will continue in the future. However, China, as a key player in the world cyclohexylamine market, will have a large impact the world market.

This report, as an updated report on basis of 2003 edition, presents an in-depth and multidimensional research on Chinese cyclohexylamine market. In this report, all the cyclohexylamine, cyclamate and CBS manufacturers in China are detected and tel-interviewed. Meanwhile, as the raw material of cyclohexylamine, aniline's historical pricing is also presented and discussed. All the manufacturers' competitiveness is analyzed, and the distribution channels of most manufacturers are also revealed.

All the presented data are exclusive and latest for the Chinese market.
