Abstracts

This report presents the overall market of bio-pesticides in China and attaches importance to eight major products: bacillus thuringiensis, abamectin, jingangmycin, bacillus subtilis, bacillus cereus, matrine, oligosaccharins and brassinolide.

Featured by no pollution, no residue and high efficiency, bio-pesticides have attracted increasing concern because of people's rising awareness of environmental protection and food safety. It's predicted that bio-pesticides have a bright market outlook in the future.

This report, the updated third edition, focuses on the following aspects of the bio-pesticide industry:

Introduction of major bio-pesticide including history, registration, technology, raw material, production, price, export and import, consumption and forecast;

Related policies on bio-pesticide in China;

Prospect of bio-pesticide in China (2016-2020);

Suggestion for the domestic bio-pesticide enterprises.
