Abstracts

This report is about disease and pest occurrence on crops in China. Basic information such as occurrence, control and yield loss of crops resulted by pests, diseases, weeds and rodents in China was reported in detail in the report in order to guide investments and business movements for the players who pay close attention to the industry or try to find opportunities from it.

In China, the overall occurrence of pests, diseases, weeds and rodents on crops was in a severe state during 2006–2016. Although the rising trend of the occurrence of pests, diseases, weeds and rodents has slowed in China, the situation remains serious in recent years.

According to the prediction from the National Agricultural Technology Extension and Service Center (NATESC) in Dec. 2016, pests like rice planthoppers, wheat aphids, pests on corn and diseases like rice sheath blight and wheat head blight may strike heavily, while wheat stripe rust, rice blast, corn northern leaf blight and potato late blight may occur moderately in China in 2017.

To provide more information, CCM has done lots of researches on the historical occurrence of pests, diseases, weeds and rodents on crops, including:
