## Abstracts

Fipronil is an outstanding insecticide and has played an important role in pest control in China. However, owing to the harmful effect of fipronil on shellfishes and bees, Chinese government has restricted the use of fipronil in China since 1 October 2009. Under the restriction, China's fipronil industry is seriously impacted. Since some companies have reduced or even stopped the production of fipronil, the supply structure has totally changed. Most active fipronil producers will pay more attention to export.

It is known that, after Bayer' fipronil patent expired in June 2008, attracted by fipronil 's promising market and fat profit, more domestic companies have taken part in fipronil production, though most of them have no production licenses. Under this situation, most fipronil produced by non-license holders is exported with names changed.

This report aims to provide comprehensive understanding about China's export situation of fipronil. Specifically, the aspects of fipronil's export, including volume, value, price, destinations and manufacturers, are emphatically covered in this report.
