Abstracts

Biodegradable material is a new kind of environmentally friendly material. With the increasing awareness of environmental protection around the world, especially in China, biodegradable materials become very promising products. However, the application of biodegradable materials was not so widely promoted as expected since the Chinese government released the Restriction of Production, Sales and Use of Plastic Bags in 2008. Even so, the capacity of biodegradable materials in China kept growing since then (a CAGR of about 33.8% during 2007-2012). So far, there are mainly four kinds of biodegradable materials in China, namely starch based plastics, PLA, PHA and PBS, among which the capacity of starch based plastics is the biggest in the last few years thanks to its mature production technology in China. To be noticed, the capacity of other biodegradable materials such as PLA (a CAGR of about 28.0% during 2008-2013) expands very fast, which indicates huge potential market in China and around the world.

What are shortages and problems of biodegradable materials industry in China? Where is the market of biodegradable materials in China so far and in the future? What about the future capacity of biodegradable materials in China? What's the technology of biodegradable materials applied so far and what's the development direction of the technology in the future?

In order to verify all the above-mentioned questions, the report was generated by CCM through investigation, deep analysis, and detail results of designed questionnaires.

The highlights of the report include:

1. Current market situation of China's biodegradable materials
2. Current technology and future trend (R&D trend)
3. Domestic policies
4. Shortage and problems of biodegradable materials industry in China

5. Forecast on capacity of biodegradable material, 2014-2019
6. Forecast on demand of biodegradable materials, 2014-2019
7. Forecast on technology improvement
8. Profiles of key domestic players

Biodegradable material is a new kind of environmentally friendly material. With the increasing awareness of environmental protection around the world, especially in China, biodegradable materials become very promising products. However, the application of biodegradable materials was not so widely promoted as expected since the Chinese government released the Restriction of Production, Sales and Use of Plastic Bags in 2008. Even so, the capacity of biodegradable materials in China kept growing since then (a CAGR of about 33.8% during 2007-2012). So far, there are mainly four kinds of biodegradable materials in China, namely starch based plastics, PLA, PHA and PBS, among which the capacity of starch based plastics is the biggest in the last few years thanks to its mature production technology in China. To be noticed, the capacity of other biodegradable materials such as PLA (a CAGR of about 28.0% during 2008-2013) expands very fast, which indicates huge potential market in China and around the world.

What are shortages and problems of biodegradable materials industry in China? Where is the market of biodegradable materials in China so far and in the future? What about the future capacity of biodegradable materials in China? 8. Profiles of key domestic players

Contents

1 CURRENT MARKET SITUATION OF CHINA'S BIODEGRADABLE MATERIALS

1.1 Supply and application

1.1.1 Supply by key product

1.1.1.1 Poly lactic acid (PLA)

1.1.1.2 Poly hydroxyalkanoates (PHA)

1.1.1.3 Polybutylene succinate (PBS)

1.1.1.4 Starch based plastics

1.1.2 Masterbatches' price, performance and application situation

1.1.3 Key producers and importers

1.2 Current technology and future trend (R&D trend)

1.2.1 By key producers and key technology routes

1.2.2 By researchers and institutes

1.3 Domestic policies

2 SHORTAGE AND PROBLEMS OF BIODEGRADABLE MATERIALS INDUSTRY IN CHINA

3 FUTURE DEVELOPMENT OF CHINA'S BIODEGRADABLE MATERIALS INDUSTRY

3.1 Forecast on capacity of biodegradable material, 2014-2019

3.1.1 Forecast on capacity of PLA

3.1.2 Forecast on capacity of PHA

3.1.3 Forecast on capacity of PBS

3.1.4 Forecast on capacity of starch based plastics

3.2 Forecast on demand of biodegradable materials, 2014-2019

3.3 Forecast on technology improvement

4 PROFILES OF KEY DOMESTIC PLAYERS

4.1 Zhejiang Hisun Biomaterials Co., Ltd

4.2 Ecomann Biotechnology Co., Ltd

4.3 Shandong Fuwin New Material Co., Ltd

4.4 Wuhan Huali Environmental Technology Co., Ltd

5 CONCLUSION

List Of Tables

LIST OF TABLES

Table 1.1.2-1 Market price of key biodegradable materials and some traditional plastics in China, Oct. 2013

Table 1.1.2-2 Performance of key biodegradable materials and some traditional plastics in China, 2013

Table 1.1.3-1 Key active producers of PLA in China, 2013

Table 1.1.3-2 Key active producers of PHA in China, 2013

Table 1.1.3-3 Key active producers of PBS in China, 2013

Table 1.1.3-4 Key active producers of starch based plastics in China, 2013

Table 1.2-1 Synthesis routes and research directions of biodegradable materials in 2013

Table 1.2.1-1 Comparison of two synthesis routes of PLA in China, 2013

Table 1.2.1-2 Key PLA producers' production technology in China, 2013

Table 1.2.1-3 Key PHA producers' production technology in China, 2013

Table 1.2.1-4 Comparison of different technology routes of PBS in China, 2013

Table 1.2.1-5 Key PBS producers' production technology in China, 2013

Table 1.2.1-6 Key starch based plastics producers' production technology in China, 2013

Table 1.2.2-1 PLA research institutes in China, 2013

Table 1.2.2-2 PHA research institutes in China, 2013

Table 1.2.2-3 PBS research institute in China, 2013

Table 1.2.2-4 Starch based plastics research institute in China, 2013

Table 1.3-1 Policies and regulations about biodegradable materials published in China, 1999~2013

Table 3.1-1 Potential biodegradable materials production line in China, 2014-2019

Table 3.2-1 Negative factors that affect the application of biodegradable materials in China, 2013

Table 3.2-2 Respondents' view on future application of biodegradable materials in China, 2014-2019

Table 3.3-1 Respondents' view on technology improvement of biodegradable materials in China, 2014-2019

Table 4.1-1 Published patents related to PLA in Zhejiang Hisun, 2007-2013

Table 4.2-1 Published patents related to PHA in Ecomann, 2009-2011

About

Key producers of PLA

Key producers of PLA are distributed in Zhejiang, Shanghai, Jiangsu and Guangdong. The capacity of the five key companies is 21,800t/a, accounting for 92.8% of the total capacity in China in 2013. As imported PLA has 36.0% of the market in 2012 and always has better performance, imported PLA is one of the challenges for domestic producers.

Respondents' view on shortages and problems of biodegradable materials industry in China

Forecast on demand of biodegradable materials, 2014-2019

xxx% of respondents say that they would like to use biodegradable materials if the production cost decreases, which means that the consumption of biodegradable materials will increase quickly if the price goes down. Apart from that, the improvement in application performance and policy encouragement will help increase the consumption of biodegradable materials in the future.

Positive factors that affect the application of biodegradable materials in China, 2014-2019

I would like to order

Product name: Future of Biodegradable Materials Industry in China

Product link: <https://marketpublishers.com/r/FAFD0DBACD6EN.html>

Price: US\$ 2,681.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:
