Abstracts

Glutamine, as one kind of amino acids with high added value, has been developing gradually in China in recent years. Nevertheless, the output and the number of glutamine producers are still small at present. As of 2012, there is only 1,800 tonnes of glutamine produced in China. And there are less than 10 glutamine producers. In current time, China has been paying more and more attention to the development of amino acid industry, especially those with high added value. As a large producer of amino acid, China has great potential in glutamine industry in the future.

Now, glutamine industry in China highly depends on overseas market. In 2011, more than 80% of glutamine produced in China is consumed by foreign countries in health care products, while the demand from China is quite small.

However, with fast development of health care industry, more and more glutamine will be needed in China.

Furthermore, researchers are continually trying to apply glutamine in new products, such as new cosmetics, new feed products, etc. Therefore, there are many opportunities in China's glutamine market. Then how those glutamine suppliers catch the opportunities at present? In the depression of global economy, what is the glutamine market in China facing currently? All this information has been unfolded in this report through the following aspects

Overview of global glutamine market

Supply and demand in China's glutamine market, 2008-2012

Key producers of glutamine in China

Sales channel and sales strategies of China's glutamine players

End users of glutamine in China

Price trend in China 2008-2017

Influencing factors of glutamine market in China

Forecast on supply and demand of glutamine in China, 2013-2017

Cost analysis of glutamine production in China
