## Abstracts

This report penetrates into Chinese herbicides industry, and discloses the market and production for herbicides (weed killers) and crop plantation in China. With the globalization of this market, Chinese herbicides industry is booming and plays more and more important roles in the world. For example, Chinese glyphosate, paraquat, acetochlor, butachlor, and 2,4-D account for large shares of the world market.

On the production side, competitors and strategic planners concerning the Chinese herbicide market face a number of questions. What is the competitiveness of Chinese herbicides industry? Who is the strong supplier of herbicides in China? What are the key factors affecting the Chinese herbicides industry? What is the trend of Chinese herbicides in the near future? How does China adjust the crop planting structure?

On the demand side, this report also analyses the import and export situation of Chinese herbicides, and estimates the domestic demand according with the planting area of major crops. The report answers the following questions: What is the dollar value of the exports of China's herbicides, and what is their export volume? What's the export price of China's herbicides? Which countries are the largest buyers? What is the import value of these herbicides, and which countries are the largest suppliers?
