Abstracts

Insecticides China News provides you with real-time intelligence on China's insecticides market.

It is a monthly published newsletter, which can be downloaded in PDF format. The subscription period is yearly, grants the subscriber 12 issues in total.

China's insecticides market has grown rapidly in recent years, almost tripling in value between 2007 and 2013, and China is now a leading exporter of insecticides.

However, the industry faces a battle to adapt to tightening environmental regulations and the banning of several highly toxic products.

Insecticides China News will help you stay ahead of the game in this fast-changing market with real-time reporting on the entire insecticides industry chain, from raw materials to end consumption. This includes:

- Breaking news from China and abroad

- The latest market data, including price information for raw materials, intermediates and end products, import/export data, production, consumption, operating rates, etc.

- In-depth analysis of market trends, Chinese government policy, the performance of leading Chinese producers, M&A, new technologies, occurrence of pests, and more

- Expert commentary from industry insiders, including regular guest articles and interviews with insiders at leading Chinese manufacturers, associations and

government organizations

HEADLINE

Through the way of changing certificate holder, Hebei Wuqiao has transferred its 4 pesticide registration certificates to its wholly-owned subsidiary Wuwei Lianshuo, including 95% nitenpyram TC, 90% clethodim TC, 95% oxadiazon TC and 98% haloxyfop-R-methyl TC. Notably, Hebei Wuqiao now is forming the production capacities of nitenpyram TC, clethodim TC, oxadiazon TC and haloxyfop-R-methyl TC, with Wuwei Lianshuo in charge of the project.

According to Hebei Xingbai in end-April, it planned to construct a 1,600 t/a emamectin benzoate project. Domestic production capacities of emamectin benzoate TC are relatively low at present, with few of them over 1,000 t/a; and the operating rate of the product remains at low level, due to limited demand. Therefore, CCM considers that Hebei Xingbai will not turn all the 16,000 t/a emamectin benzoate TC into effective capacity. However, from the prospective of Hebei Xingbai's product mix, it is advantageous in the raw material for production of emamectin benzoate TC.

Conforming to the trend of pesticide industrial transfer to western and central China and to the company's own longterm development strategy, Dapeng Pharm planned to build a new production base in Liugou Coal Chemical Industrial Park, Guazhou County, Liuquan City, Gansu Province; and a 20,130 t/a high-efficiency, low-toxicity, lowresidue and environmental-friendly pesticides project will be launched within the new production base, relying on its mastered techniques. Through the project, Dapeng Pharm will further expand the production capacities of existing products and form large-scale production capacities of strategic reserve products in which a large sum of funds have been invested previously.

Hubei Tianzelong started to grasp market share by forming production capacities of 2,000 t/a chlorantraniliprole TC, 2,000 t/a emamectin benzoate-chlorantraniliprole 12% SC, 2,000 t/a chlorantraniliprole 20% SC and 50 t/a chlorantraniliprole-thiamethoxam 0.16% GR.

Anhui Shengli plans to launch a pesticide and intermediate relocation, transformation and comprehensive production project in its new plant in Gangkou Industrial Park, Ningguo City, Anhui Province. Through the project, the company will relocate part of the production lines from the old plant to the new one and build production line for products

with better competitiveness. Notably, Anhui Shengli will not equip itself with production capacity of triazophos TC in the new plant.

In May, prices of most domestic insecticide TC products remained stable. As for organophosphorus insecticides, most of the prices kept stable at high level, because the prices of their raw materials stayed high, though their downstream demand failed to support the prices. As for pyrethroid insecticides, downstream demand was slack, leading to the decreasing ex-works quotations from producers. As for nicotinamide insecticides, the increasing prices of raw materials upheld their prices, though downstream orders were limited.

According to the import and export data sourced from Tranalysis, in Jan., 2021, China exported 1,165.67 tonnes (actual volume) or 57.36 tonnes (100% AI volume) of avermectin to 15 main destinations including Vietnam, Uganda, Indonesia, Bangladesh and Sri Lanka.

According to ICAMA, the registrations of 6 chlorfenapyr products were approved, all of which are compound products and are of low toxicity. Data from ICAMA showed that there were 166 registered chlorfenapyr products in China, by end-May, including 66 compound formulation, 87 single-agent and 13 TC products. Chlorfenapyr has become one of the most high-profile insecticides in China. It is believed that China will see more registrations of chlorfenapyr compound products.

The MOA issued a notice in mid-May, requiring local governments to pay efforts in field management and disaster prevention to ensure summer grain harvest. It was reported that the high-incidence season for convective weather has arrived in China, affected by the superimposed impacts from warm and humid air from the south and dry and cold air in upper trough. For the sake of ensuring harvest, MOA gave guidance from 5 perspectives such as strengthening responsibility shouldered, monitoring and pre-warning, field management, disaster prevention and relief and cross-regional mechanical harvest.

Guangxi Zhuang Autonomous Region saw heavy precipitation in May when rice in most areas were in tillering stage. The heavy precipitation and tillering-stage rice were both good for the development of pests. The local government has issued warning and provided guidance to rice growers for prevention and control of pests on rice.

Contents

Headline

Editor's Note

Column 1 Company Dynamics

Hebei Wuqiao transfers 4 pesticide registration certificates to Wuwei Lianshuo

Hebei Xingbai to build 1,600 t/a emamectin benzoate TC production line

Dapeng Pharm to build new production base in western China

Hubei Tianzelong to grasp market share of chlorantraniliprole TC

Anhui Shengli not to form production capacity of triazophos TC in new plant

Column 2 Market Dynamics

Price of China's insecticide TC turns stable

Column 3 Import and Export

China's export of avermectin to main destinations in Jan., 2021

Column 4 Registration

Registrations of 6 chlorfenapyr compound products approved

Column 5 Policy Dynamics

MOA requires efforts in field management and disaster prevention to ensure summer grain harvest

Column 6 Pest

Heavy precipitation benefits development of pests on rice during tillering stage

Column 7 Brief News

Sino-Agri Union to raise fund for pesticide project of its subsidiary

EU to ban application of 3 neonicotinoid pesticides on some crops

Syngenta Group to establish around 1,100 MAP technical service centers in China

Chinese chlorfenapyr TC price decreases in mid-May

BASF launches new rodenticide in China

Compilation of standard for nanometer pesticide formulation begins

Hunan Province sees grim task to treat rice pests and diseases

Jiangsu Province to strengthen management of chemical companies located without chemical parks

Pre-review for group standards in Regulations for Assessment of Green and High-quality Pesticides

Heilongjiang Province issues prevention plan against *Solenopsis invicta*

Column 8 Price Update

Ex-works prices of major insecticides in China, 8 May, 2021

Shanghai Port prices of major insecticides in China, 8 May, 2021

FOB Shanghai prices of major insecticides in China, 8 May, 2021
