Abstracts

China's mannitol production is gradually changing in the past few years, which can be reflected in raw materials and production methods, consumption. This report covers production, import&export, pricing, consumption and future forecast of this industry in China. The production is clearly presented by summarizing the situation of raw materials, production technologies, capacity and output, and their products in every active mannitol producer in China. Changes to the domestic mannitol production also brings about changes to the import&export, products and consumption of China's mannitol. Based on the discussion of the aspects mentioned above, and analysis of the influencing factors, a five year forecast is made on China's mannitol industry.
