Abstracts

The executive summary is extracted from Kcomber's report Market Overview of Methylal Utilized as Dissolvent in China, which is finished in July 2016.

Methylal is an environment-friendly dissolvent which is mainly applied to insecticides, water based coating and cleaning agent. It's a great substitute to toxic dissolvent. Because most producers in China produce methylal with the purity from 85% to 90%, higher-purity methylal is few in the Chinese market and it's a good investment opportunity.

In this summary, you can have an overview of the Chinese methylal market, including the production, consumption and technologies of methylal.
