Abstracts

This report aims to analyse the general situation and development trend of China's feed probiotics market and to sort out the interview records with selected insiders who are specializing in feed production, livestock and poultry farming in China.

With the increasing awareness of the impact on human bodies and the environment, brought by the application of antibiotics and other chemicals in feed industry, people have searched substitutes for these additives. In the process of research and practice, probiotics have drawn people's attention. Feed probiotics have been widely used as feed additives because they are safe, effective, and environment-friendly without drug resistance, toxicity and residue, and may gradually replace antibiotics.

During the interviews with domestic feed production, livestock and poultry breeding enterprises, they gave a brief introduction to the application of antibiotics, probiotics and breeding technology without antibiotics, and provided insights on related issues in the feed probiotics market in China.

From this report, you will get the information as followings:

Current status of Chinese feed probiotics

Feed production, livestock and poultry breeding enterprises' program of constructing poultry intestinal microecology

Use of feed probiotics in feed production, livestock and poultry breeding enterprises

Use of antibiotics in feed production, livestock and poultry breeding enterprises

Views and progress on the substitution for antibiotics of the feed production, livestock and poultry breeding enterprises

Understanding and application on feed probiotics of feed production, livestock and poultry breeding enterprises

Problems in the practical application of feed probiotics

Influencing factors for the development of feed probiotic industry in recent years

Future trends of feed probiotics in China

Contents
