Abstracts

The Executive Summary of Production and Market of Sodium Gluconate in China is from CCM's report Production and Market of Sodium Gluconate in China, which was finished in April, 2015.

The rapid production expansion in 2003-2010 has enabled China to become one of the major sodium gluconate (SG) suppliers in the world. After then, China's SG has entered an integration period.

Corn is the raw material in the SG production in China. As for its producing technology, fermentation method and catalytic oxidation method are the two methods adopted in China.

Because of the abundant SG supply in the domestic market, a small quantity of SG has to be imported. Instead, China's export volume of SG has seen a rapid growth during 2012 and 2014, and reached 117, 541 tonnes in 2014, about 45% higher than that in 2012, with Asian countries being the main market. As for the SG consumption, concrete additive remains the largest downstream field in China.

The Executive Summary of Production and Market of Sodium Gluconate in China briefs you the production and market of the SG in China, showing you the potential of China's SG industry.
