## Abstracts

China's pectinase market has witnessed a rapid development in the past few years. From 2004 to 2010, the total output increased from 477 tonnes to 961 tonnes with a CAGR of 12.4%. However, the output is still less than those of other main enzymes, such as  $\alpha$ -amylase and gluco-amylase. Owing to the small usage in different fields, pectinase demand is also small. China's total demand for the product was 1,281 tonnes in 2009, with the largest part used in fruit and vegetable processing. What's the precise figure used? And what about other application fields? Besides these, the forecast on future demand in China is also available.

Moreover, producers play an important part in the supply chain of pectinase. More than 80% of major producers are included in the report. What is the production situation of them? How about their dynamics?
