Abstracts

It is the second edition report about SPCs production and consumption in China.

China is now the top paper making and consumption country in the world by volume, however it is far from a powerful papermaking country which can be seen from the advanced paper equipment and high-end SPCs. In China, the best paper equipment and SPCs are imported or made by foreign enterprises in China and the application of SPCs in paper is lower than developed countries.

Paper industry in China is now under the upgrading process. With more and more new and large equipments as well as new technology adopted and increasing demand of paper, the future of SPCs in China is promising.

In this report, CCM focuses on following aspects:

- Major paper species production and consumption situation in China

- Major SPCs producer in China

- Competition between domestic producers and foreign/ joint ventures both in papermaking and SPCs' production

- Major SPCs production situation in China

- Current technologies in papermaking and trends in the next five years

- SPCs consumption breakdown in each paper species by value and volume

- SPCs consumption trend in the next five years by volume

Experts view on the trends of papers and SPCs in China

Opportunities in SPCs industry

This report can provide an overview of SPCs production and consumption as well as key players in China.
