## Abstracts

**Description:**CCM had released a market report named Study on Lignin and Lignin-based Products in China in Jan, 2011. In order to meet clients' various demands and provide more price attracted products, we separated it into many sub-reports with different specific themes. Study on Lignin in China is one of the sub-reports.

In this report, CCM International makes a brief introduction to the whole lignin industry with concentration on the raw materials, technology development, application situation and future forecast etc, through study the entire industrial chain of lignin.

In China, three kinds of raw materials can be used to produce lignin, namely black liquor of papermaking, grain straw and by-products of cellulose fuel ethanol production. At present, most lignin manufacturers mainly adopt black liquor of paper making as raw material to produce lignin in China.
