## Abstracts

Bio-pesticides are certain types of pesticides derived from such natural materials as animals, plants, bacteria, and certain minerals. For example, canola oil and baking soda have pesticidal applications and are considered bio-pesticides. With people's rising awareness of environmental protection and food safety, more and more attention has been paid to bio-pesticide, which enjoys advantages of no pollution, no residue, and high efficiency. So bio-pesticide has bright market outlook in the future.
